

UTV Wheel Spacer Brief

UTVs have rather narrow tread widths. The UTVs narrow tread widths make the machines tippy and unstable especially when on uneven terrain. In fact, the Consumer Product Safety Commission has required all Yamaha UTVs to be equipped with wheel spacers.

Durablue now offers its unique EZ fit system wheel spacers exclusively for UTVs. The Durablue UTV series spacer is a full 2 ½" wide, the widest available. That makes the UTV tread width a full 5" wider than stock. This is a substantial increase and will make a noticeable difference in the stability of the vehicle.

For this vehicle, Durablue has chosen to use an aluminum casting designed to eliminate as much weight as possible. It may be the lightest alum spacer available. It will also use the proven EZ fit system, minimizing installation, tool requirements and time. The spacers can be removed at any time by unscrewing the four stud extenders and reinstalling the wheel.

The cost of widening the tread width of your UTV can be very expensive. Now, Durablue offers a method to widen your UTV 5" for about 1/10 the cost existing methods.

With safety, cost and ease of installation, Durablue UTV wheel spacers are the obvious choice.
