

# DuraBlue Axles Explained

### General Characteristics

*Durablue has 3 styles of axles:*

Heavy Duty— HD axles are twice as strong as stock and made for leisure riding. They have a nickel plated finish.

Eliminator Series— These axles are heat treated and many times stronger than stock axles. They have a polished chrome finish and come in stock length or longer. Made for racing and jumping!

X-33 Axles These are heat treated and are the strongest axles on the market. They use a specially designed wheel hub that won't come loose. Made for hard core racing and jumping. **Torque hub nuts 60 to 90lbs**

### General Information

- 1) Current world record holder for the fastest axle at 205 MPH. (X-33 axle)
- 2) Durablue has been the leading manufacturer of axles for over 20 years. We are also the most copied manufacturer in the industry.
- 3) DB axles are the only ones that can withstand the high torque required for drag racing. The competitors axles are too soft.
- 4) Installation is easy. **You will not have to buy any extra parts!**
- 5) Many times stronger than stock axles.
- 6) 3 styles to choose from.
- 7) "HD" and "Eliminator" axles use stock wheel hubs and stock carriers. X-33 uses stock carriers.
- 8) Warranty on all axles against bending and breaking.

### How axle part numbers can help you.

When you are ordering an axle, the part number will tell which axle you are ordering.

20-1142 A plain number like this is for the heavy duty axles.

20-1142p (P) This is for the eliminator axles and is generally std. length or + 1.

20-1142sp (SP) This is for the eliminator plus 3 or 2 +2 axle.

20-1142ex (ex) This is for the X-33 series axles. Wheel hubs come with axle.

### Quad Lingo

You may hear the term "2 plus 2" or "plus 4" when talking about axles. What does this mean? It is a general term that refers to how much longer the axle is than the stock axle. If someone asks for a 2+2 axle that means it is about 4" longer than the stock axle. You can say the same thing as "plus 4". Remember 2+2 and plus 4 are general terms. The actual length may be slightly different! Most 2 plus 2 axles can be adjusted by changing the order of the spline spacers that come with the axle!

**Note:** All Durablue axles come with everything you will need for complete installation. The parts that come with each axle will vary. Parts that do not come with the axle, you will use your stock parts. For axles that use spline spacers, the small spacer goes on first! The rounded part of the spacer goes against the shoulder of the axle. **Torque X-33 wheel hubs 60 to 90 ft. lbs!** This is important.
